VISIONZ

## Veil

Veil transforms the standard troffer into an architectural element. With warm, natural wood and a selection of louver styles, drop heights, and finishes, it introduces softness and texture to the ceiling plane. The result is a modern, refined fixture that brings biophilic warmth overhead.

## Crescent

The Crescent Lens offers a sleek, modern design with exceptional light distribution, making it the ideal choice for any direct or indirect application in need of a beautifully crafted luminaire.

## Butterfly

Butterfly challenges traditional luminaire design, typically reliant on translucent diffusers to distribute light. Instead, it delivers an 80% indirect / 20% direct distribution with a distinctive open-web optical profile finished in highly reflective matte white eco-friendly paint. The LED engines are concealed from viewing from below, reducing glare and creating a unique open-air experience.

## Glow

Glow challenges traditional luminaire design, typically reliant on translucent diffusers to distribute light. Instead, it delivers 100% direct optical distribution. The fixture utilizes two light sources aimed at an arch finished in highly reflective eco-friendly paint to deliver a low-glare glowing illumination without needing plastic diffusers.
